

# Aborted Fetal Material in COVID-19 Vaccines

May 18, 2021

ICAN SEEKS TO CONFIRM MICHIGAN IS COMPLYING WITH A RECENT LAW THAT REQUIRES IT TO DISCLOSE WHICH VACCINES ARE DEVELOPED USING ABORTED FETAL TISSUE.

ICAN wrote to Michigan's Department of Health and Human Services to request, as required by law, a copy of the documents by which COVID-19 vaccine recipients are being provided information regarding the use of fetal tissue or cells in developing these vaccines.

A newly enacted **Michigan law**<sup>1</sup> requires that: "A recipient of a COVID-19 vaccine ... shall be provided with information or informed if and in what manner the development of the vaccine utilized aborted fetal tissue or human embryonic stem cell derivation lines." ICAN sent a **letter**<sup>2</sup> to the Michigan Department of Health and Human Services on May 4, 2021 seeking a copy of the document(s) by which COVID-19 vaccine recipients are being provided this information.

The development of each of the three current COVID-19 vaccines currently in use involved aborted fetal tissue or human embryonic stem cell derivation lines:

- Johnson & Johnson/Janssen: Fetal cell cultures are used to produce and manufacture the J&J COVID-19 vaccine and the final formulation of this vaccine includes residual amounts of the fetal **host cell proteins**<sup>3</sup> ( $\leq 0.15$  mcg) and/or **host cell DNA**<sup>4</sup> ( $\leq 3$  ng).
- Pfizer/BioNTech: The **HEK-293**<sup>5</sup> abortion-related cell line was used in research related to the development of the Pfizer COVID-19 vaccine.
- Moderna/NIAID: Aborted fetal cell lines were used in both the development and testing of **Moderna's**<sup>6</sup> COVID-19 vaccine.

12 week old fetus

Street Suite 260 Austin, Texas 78705

Cell lines derived from aborted babies used in the production or testing of COVID vaccines, most likely came from babies, at least 12 weeks old, who were aborted alive, and according to the general practice as outlined in medical literature, may have been placed in a fridge while still living where they awaited dismemberment before having their organs harvested.

Pfizer and Moderna performed confirmation tests (to ensure the vaccines work) using fetal cell lines. And Johnson & Johnson uses fetal cell lines in vaccine development, confirmation and production.

The Janssen COVID-19 Vaccine includes the following ingredients: recombinant, replication-incompetent adenovirus type 26 expressing the SARS-CoV-2 spike protein, citric acid monohydrate, trisodium citrate dihydrate, ethanol, 2-hydroxypropyl- $\beta$ -cyclodextrin (HBCD), polysorbate-80, sodium chloride.

The Pfizer-BioNTech COVID-19 Vaccine includes the following ingredients: mRNA, lipids ((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), 2 [(polyethylene glycol)-2000]-N,N-ditetradecylacetamide, 1,2-Distearoyl-sn-glycero-3-phosphocholine, and cholesterol), potassium chloride, monobasic potassium phosphate, sodium chloride, dibasic sodium phosphate dihydrate, and sucrose.

**There are no FDA approved “vaccines” available for prevention of COVID-19.  
COVID-19 “vaccines” are available only under Emergency Use Authorization.**

Babies are murdered so that you and others can have vaccines, that in case after case have been proven not to work. If you feel that abortion is murder and yet you receive the shot, what are you guilty of?

Stanley Plotkin admitted to murdering 79 babies for one of his vaccine projects and many more in others. Watch this video: <https://www.youtube.com/watch?v=UqJyKtis7VM&t=5s> (Start listening at 45 minutes into the video.)

There are four fetal cell lines that are being used in vaccines currently available. These four cell lines are MRC-5, WI-38, PER C6, HEK293.

In addition to these fetal cell lines, abortions were also done to obtain RA27/3 for use in the rubella vaccine. The rubella vaccine alone is the result of at least 99 abortions \*32 for WI-38 and 67 for RA27/3). Yes they came from abortions, not babies who died naturally in the womb.

The baby has to be alive when the tissues are taken. Otherwise, they are unusable.

MRC-6 and Wi-38 are both from the 1960s. Per C6 is from 1985, while HEK293 is from 1972. There are other aborted fetal cell lines that exist, but are not currently being used for vaccinations.

The most recent aborted fetal cell line is from 2015 (Walvax2). This particular cell line is the result of 9 abortions.

Of those vaccines that are currently FDA-approved, all of the MMR (measles, mumps, rubella:, hepatitis A, and chickenpox vaccines, including any combination vaccines for these illnesses, use aborted fetal cell lines. One of the shingles vaccine brands and one of the rabies vaccines also use aborted fetal cells.

As for experimental COVID injections, Johnson & Johnson and AstraZeneca both use aborted fetal cell lines on which to grow the virus for the vaccines.
